

DOCUMENT 3 OF 3

# Final review

Independent wrap-up after construction, hardening, foldable work, RFQ delivery, and the 4 Sep 2026 retest.

## Verdict

**PASS for release as a static marketing + RFQ site**, with one owner action: click the FormSubmit activation mail in Yahoo so HTTP delivery is live. Until then, RFQ still works via the visitor's mail app.

## Fit for purpose

| Question                        | Answer                                                                                                  |
|---------------------------------|---------------------------------------------------------------------------------------------------------|
| Looks industrial and on-spec?   | Yes — navy/amber tokens, factory photos, ISO chips, machine table.                                      |
| Usable on a phone?              | Yes — 320–430 px, bottom nav, RFQ stacked, 16 px fields.                                                |
| Usable on 2026 foldables?       | Yes — cover / inner / inner-landscape / Flip cover / flex pane tested.                                  |
| Seven languages?                | Yes — dictionaries complete; UK flag for English.                                                       |
| Can a buyer request an offer?   | Yes — 3 steps, validation, GDPR, file vetting, HTTP + mailto.                                           |
| Did we send a real example?     | Yes — FormSubmit accepted the POST and mailed Yahoo an activation (and will mail RFQs after the click). |
| Security reasonable for static? | Yes — strict CSP, upload gates, no eval, no PII cache.                                                  |
| Load?                           | 320/320 OK locally; CDN still advised for global photos.                                                |

## Request-offer experience (pleasant path)

- Entry: header RFQ, hero “Request a Free Technical Quote”, catalogue “Quote a similar part”, contact CTA, mobile Quote tab.
- Step 1 is two selects and three production modes — no empty required fields besides choosing a mode (defaulted).
- Step 2 files are optional; bad files show a red chip instead of blocking the whole form.
- Step 3 pre-fills a delivery date two weeks out; invalid email/phone/name explain themselves; GDPR is explicit.
- Submit shows “Sending...”, then a success card with copy-text. No silent failure.

## Owner checklist after this pack

- Open Yahoo for trif\_marius1@yahoo.com → FormSubmit “Activate Form” → click once.
- Send a second RFQ from the site; it should land as a table email (not only activation).
- Point metalprodservice.com DNS at the dist/ host; confirm HTTPS so HSTS is meaningful.
- Create the rfq@metalprodservice.com mailbox and, when ready, switch RFQ\_OWNER\_MAIL / RFQ\_MAILBOX in src/rfq.ts.
- Replace placeholder phone copy when the public number is confirmed.

## Out of scope / next backend

Server-side antivirus of CAD, authenticated customer portal, CRM hook, and rate limiting cannot be finished in a static SPA. The front door is ready; those are a second project.

## Sign-off

Built with Vite 6 + TypeScript + Three.js. Retested unit, e2e, load, foldable viewports, RFQ happy path, and a live HTTP post to the owner inbox. Documents in this pack: Build and Technology; Test Report; this Final Review.
