

DOCUMENT 2 OF 3

What was tested and fixed

Catalogue of tests run from scratch, defects found, fixes, and retest results (4 Sep 2026).

1. Final scores (this pass)

Suite	Result	Notes
Vitest unit (security + i18n)	16 / 16 PASS	Magic bytes, XSS escape, mailto injection, FormSubmit mock, 7 locales
Playwright e2e (Chromium + mobile)	82 / 82 PASS	Buttons, RFQ tabs, happy-path submit, languages, UK flag, photos, foldables
Load / stress	320 req, 0 failed	80 users × 4 rounds; avg 214 ms; p99 455 ms
Live RFQ HTTP	Activation mailed	FormSubmit posted from the site origin to trif_marius1@yahoo.com

2. What “from scratch” covered

2.1 Functional / UI / buttons

- Logo home, desktop nav, mega-menu (6 services), burger drawer, mobile bottom nav, header RFQ, hero CTAs.
- Language menu (7 locales), UK Union Jack vs French tricolour, theme toggle, cookie accept/reject.
- Catalogue filters, RFQ step tabs + Continue/Back/Submit, privacy/terms modal, map link.

2.2 Usability / UI-UX

- 16 px inputs (no iOS zoom), 44 px tap targets, skip-link, focus-visible, opaque sticky header, scroll-margin for hashes.
- RFQ: sending state, success copy, clipboard copy, default delivery date +14 days, files optional, GDPR required.

2.3 Devices and OS (layout emulation)

Native Safari/Firefox/Edge binaries were not installed in this Windows workspace. Layout was verified in Chromium with device viewports that match 2026 phones, tablets and foldables (iOS and Android CSS pixel sizes are independent of the engine for wrapping and overflow). Foldables: Z Fold 6/7/8 cover+inner+landscape, Pixel 9/10 Pro Fold, Honor Magic V6, OnePlus Open, Z Flip 6/8 open+cover, Razr cover, Flip flex pane.

2.4 Security

- Headers: nosniff, SAMEORIGIN, CSP object-src none, worker-src none, no unsafe-eval.
- Upload: exe/hta/aspx blocked, RTL filenames blocked, IGES no longer accepts any file starting with S, DXF requires SECTION/ENTITIES.
- Form: honeypot, min fill time, HTML escape of file chips, CRLF stripped from mailto.

2.5 Performance / load / stress

Local static preview, 80 concurrent clients × 4 rounds = 320 requests across HTML, favicon and factory JPEGs. Failed 0. Average 214 ms, p99 455 ms (well under the 1.5 s gate).

3. Defects found and fixed (project history)

ID	Symptom	Fix
D01	English flag looked French	Union Jack SVG

ID	Symptom	Fix
D02	RFQ tabs did not switch (CSS [hidden])	display:none !important; progress-tab buttons
D03	Hero 3D was an unreadable mill	CNC spur gear, later scaled 0.7
D04	Phone header overlapped UK flag	Compact wordmark; hide tagline ≤980 px
D05	Landscape phone nav crushed hero	Hide bottom nav; 2-col hero ≥600 px landscape
D06	2-col cards on 390 px phones	1-col services/catalogue below 600 px
D07	DE bottom nav overflow	Short mobile.* labels
D08	Sticky header ghosted titles	More opaque header; scroll-margin
D09	Fold inner used phone 1-col	2-col hero/services from 600 px; hide nav if height ≤680
D10	Flip cover clipped title/CTA	Short-pane 1-col, hide 3D and secondary CTA
D11	DXF magic accepted any "0"	Require SECTION/ENTITIES/AutoCAD
D12	IGES magic too weak	IGES token or column-73 S record
D13	RFQ only opened mailto	FormSubmit HTTPS + mailto fallback + copy
D14	Draft stored email/phone	sessionStorage keeps process fields only
D15	Inline styles blocked dropping CSP unsafe-inline	Moved to CSS classes

4. RFQ send — live check (4 Sep 2026)

A sample RFQ (Acme Hydraulics SRL, engineer Ioan Pop, prototype 16MnCr5 shaft, h6, qty 1) was posted from <http://127.0.0.1:4173> to FormSubmit for **trif_marius1@yahoo.com** (git user.email / owner inbox). HTTP 200. FormSubmit replied that the form needs one-time activation and that it had emailed an **Activate Form** link to that Yahoo address. Until that link is clicked, further HTTP posts stay pending; the site still opens a pre-filled mail message as fallback and can copy the RFQ text. After activation, the same submit path delivers a normal table email to Yahoo.

5. Residual limitations

- Playwright "mobile" is Chromium with an iPhone viewport, not WebKit.
- ZIP payloads are not unpacked on a server.
- Bunny fonts and OpenStreetMap remain third-party.
- rfq@metalprodservice.com still needs a real mailbox/DNS; owner Yahoo is the live inbox now.
